

variable name in dataset – “Variable name in article”; Variable description; Data source.¹

ccode – [not mentioned in article]; Numerical country identifier; Correlates of War (COW) dataset (Ghosn and Bennett 2007).

year – Current year for outcome variables; Ranges from 1974 through 2003, year “ t ”, while the corresponding “ $t-1$ ” values for predictor variables are 1973 through 2002; PITF dataset (Marshall, Gurr, and Harff 2010).

ef – “ EF_{t-1} ”; Ethnic fractionalization; Data are from Fearon (2003).

instability – “ $Instability_{t-1}$ ”; Political instability in year $t-1$; Political Instability Task Force (PITF) dataset (Marshall, Gurr, and Harff 2010).

finstability – “ $Instability_t$ ”; Political instability in year t ; PITF (Marshall, Gurr, and Harff 2010).

lnTotalpop – “ $lnPopulation_{t-1}$ ”; Total population, natural logarithm; COW dataset (Ghosn and Bennett 2007).

mena – “MENA”; Middle East and North African states (MENA); based on COW (Ghosn and Bennett 2007).

csasia – “CSASIA”; Central and South Asian states (CSASIA); based on COW (Ghosn and Bennett 2007).

nac – “ $NeighborConflict_{t-1}$ ”; Number of bordering states with any type (societal or interstate) internal conflict; Major Episodes of Political Violence dataset (Marshall 2010).

abbrev – [not mentioned in article]; Country abbreviation; COW (Ghosn and Bennett 2007).

country – [not mentioned in article]; Country name; COW (Ghosn and Bennett 2007).

¹ Abbreviations and bibliographic references are as in main article text.

fgenpold – [not mentioned in article]; Genocide / Politicide dummy variable year $t+1$, including ongoing cases; PITF (Marshall, Gurr, and Harff 2010).

AssassinDum – “Assassin _{t} ”; Successful or attempted political assassination, dummy variable for any instance(s) in a given year; Banks (2011).

stabyrs – “StabYrs _{$t-1$} ”; Time since last instability year, begin from 1948, calculated with BTSCS software (available here: <http://www-personal.umich.edu/~wmacmill/stata/btscs/btscs-a-binary-time.pdf>); Based on PITF data (Marshall, Gurr, and Harff 2010).

_prefailstab - “PrevInstability _{$t-1$} ”; Number of previous failures (instability years), calculated with BTSCS software (see URL above); Based on PITF data (Marshall, Gurr, and Harff 2010).

stabyrs2 – “StabYrs _{$t-1$} ²”; squared stabyrs; Based on PITF data (Marshall, Gurr, and Harff 2010).

polity2sq_inv – “MixedRegime _{$t-1$} ”; The polity regime-type index, ranging from -10 through +10, squared and subtracted from 100 such that it takes higher values for regimes towards the middle of the index; Polity IV dataset (Marshall, Jaggers and Gurr 2010).

NUMIGO – “NUMIGO _{$t-1$} ”; Number of International Governmental Organization memberships; COW IGO dataset (Pevehouse, Nordstrom, and Warnke 2004).

regchange1to3 – “PolChange3 _{$t-1$} ”; Regime change over last three years, calculated as the sum of first differences [(Polity _{$t-1$} - Polity _{$t-2$}) + (Polity _{$t-2$} - Polity _{$t-3$}) + (Polity _{$t-3$} - Polity _{$t-4$})]; Polity IV dataset (Marshall, Jaggers and Gurr 2010).

IIMR – “IMR _{$t-2$} ”; Lagged Infant Mortality Rate, $t-2$; Data are from Abourhieb and Kimball (2007).

lAssassinDum – “Assassin _{$t-2$} ”; Lagged Political assassination $t-2$, Successful or attempted assassination; Banks (2011).

SLDdum – “SLD _{$t-1$} ”; State-led Discrimination, either economic or political, against a particular group, coded as a dummy variable with state-years not included in the MAR dataset = 0; Minorities at Risk dataset (2009).

genpold – [not mentioned in article]; Genocide / Politicide dummy variable year t , including ongoing cases; PITF (Marshall, Gurr, and Harff 2010).

statename – [not mentioned in article]; State (country) name, shortened or adjusted from “country” variable; authors.

fgenpolonsetd – “GenocideOnset _{t} ”; Genocide / Politicide onset, ongoing years set to missing; PITF data (Marshall, Gurr, and Harff 2010).

prefailgp – “PrevGen{*t-1*}”; Number of previous failures (genocide/politicide onsets) since 1948, calculated with BTSCS software (see URL above); Based on PITF data (Marshall, Gurr, and Harff 2010).

nogpyrs2 – “NoGenYrs²_{*t-1*}”; Squared value of time since last genocide/politicide onset, begin 1948, calculated with BTSCS software (see URL above); Based on PITF PITF data (Marshall, Gurr, and Harff 2010).

nogpyrs3 – “NoGenYrs³_{*t-1*}”; Cubed value of time since last genocide/politicide onset, begin 1948, calculated with BTSCS software (see URL above) from PITF data (Marshall, Gurr, and Harff 2010).

RulingEliteEthnicity – “EthnicPowerRel_{*t-1*}”; Values: 0 ethnicity not relevant, 1 ruling elite in the majority, 2 ruling elite in the minority; Ethnic Power Relations dataset (Cederman, Min, and Wimmer 2009) .

fullaut – “FullAut_{*t-1*}”; Fully authoritarian regime dummy variable, Polity values of -7 or less are coded as fully authoritarian; Polity IV dataset (Marshall, Jaggers and Gurr 2010).

partaut – “PartAut_{*t-1*}”; Partially authoritarian regime dummy variable, Polity values from -6 through 1 are coded as partially authoritarian; Polity IV dataset (Marshall, Jaggers and Gurr 2010).

partdem – “PartDem_{*t-1*}”; Partially democratic regime dummy variable, Polity values from 2 through 6 are coded as partially democratic; Polity IV dataset (Marshall, Jaggers and Gurr 2010).

humdefburCC – “HDB_{*t-1*}”; Human defense burden, calculated as per Colaresi and Carey (2008), total military personnel divided by natural log of total population; COW dataset (Ghosn and Bennett 2007).

exuncHDB_cc – “Uncon×HDB_{*t-1*}”; as per Colaresi and Carey (2008), unconstrained executive interacted with (multiplied by) human defense burden, we interact a dummy variable indicating an unconstrained executive (scoring 1 or 2 on the exconst component of Polity) with the number of military personnel divided by the logged population. Polity IV and COW dataset (Ghosn and Bennett, 2007).

FDexuncHDB_cc – “Uncon×fdHDB_{*t-1*}”; first difference of “exuncHDB_cc”, (*t-1*) – (*t-2*); Polity IV and COW dataset (Ghosn and Bennett, 2007).

NELDAperiod – “ElectionPeriod_{*t-1*}”; Election Period, there is an election recorded in the NELDA data for year *t-2*, *t-1*, or *t*; NELDA dataset (Hyde and Marinov 2012).

efNELDAperiod – “ $EF_{t-1} \times ElectionPeriod_{t-1}$ ”; Ethnic fractionalization interacted with (multiplied by) Election period; data sources EF (Fearon 2003) and NELDA (Hyde and Marinov 2012).

fNELDAperiod – “ $ElectionPeriod_t$ ”; Forward-lagged Election Period, i.e., there is an election recorded in the NELDA data for year $t-1$, t , or $t+1$; NELDA dataset (Hyde and Marinov, 2012).

impute01 – [not mentioned in article]; Variable marking observations (country-years) with imputed data, these observations are characterized in the article text; authors.

yeartminus1 - [not mentioned in article]; Year of predictors, i.e., all variable names above not beginning with the letter 'f' correspond to this year; variable names beginning with the letter 'f' (but not 'fn') are for year $t-2$;

pr_instab – “ $PrInst_t$ ”; this variable is not included in the dataset, but is generated from the stage 1 model using the Stata command “predict”, which produces the estimated probability of instability in year t ; authors.

Summary statistics for the data file:
